

# How to fold: The *AirHover '21*

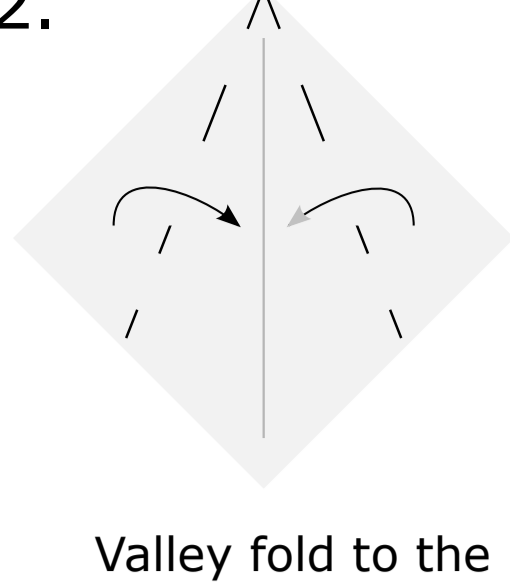

Difficulty: 4/10

1.

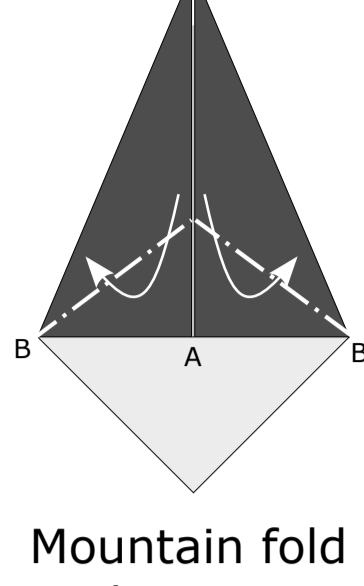

Valley fold and unfold.

2.

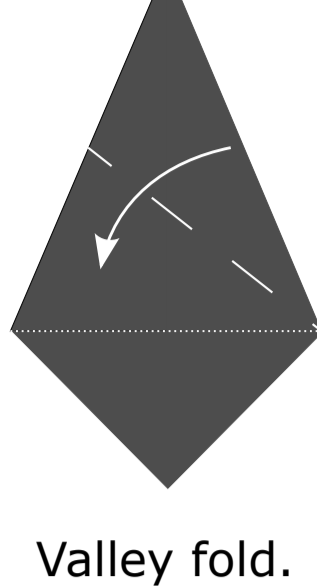

Valley fold to the center line.

3.

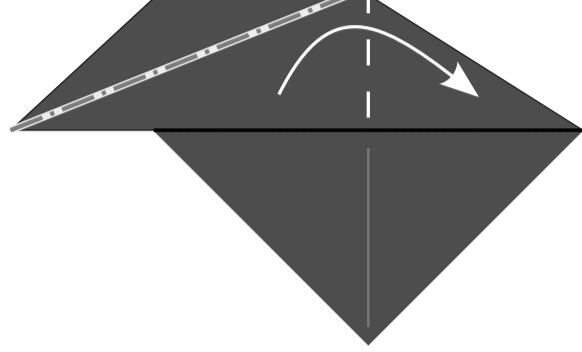

Mountain fold so AB lies on BC. Turn the model over.

4.

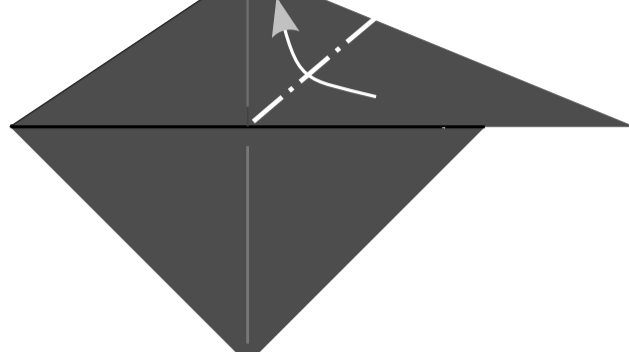

Valley fold.

5.

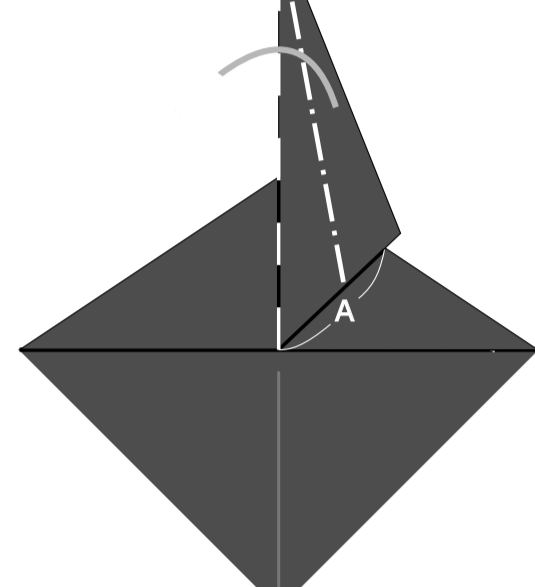

Squash fold.

6.

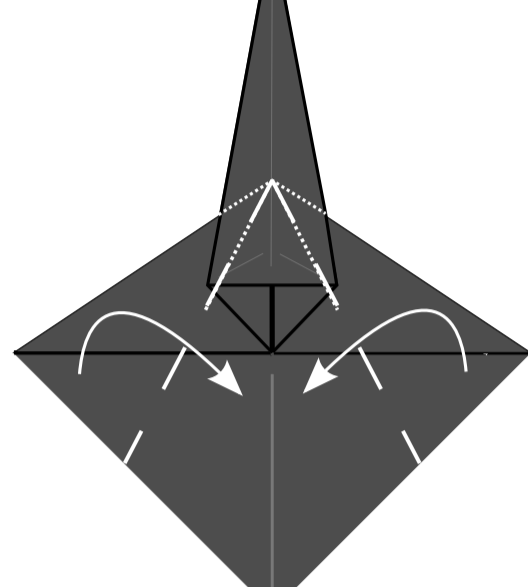

Outside reverse fold.

7\*.

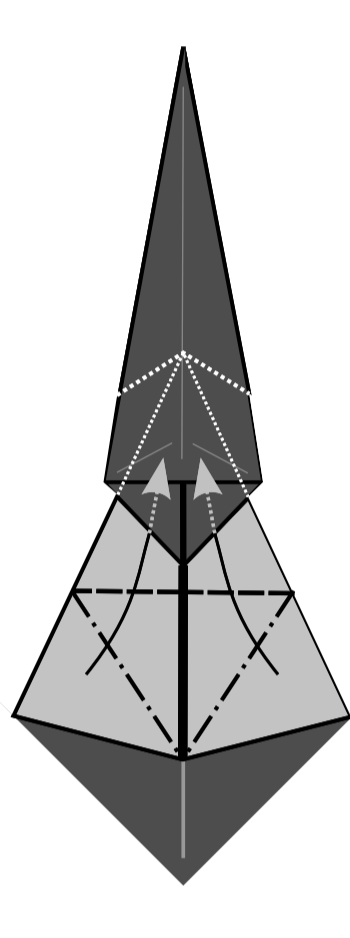

Insert your finger in the pocket at A and flatten the entire flap symmetrically.

8.

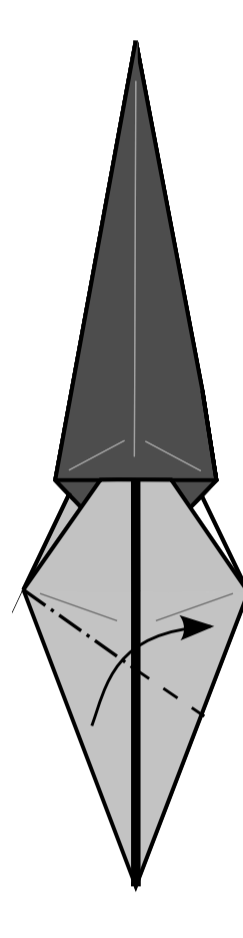

Valley fold. On the top, tuck the tab underneath the tall triangle made in the previous step.

9.

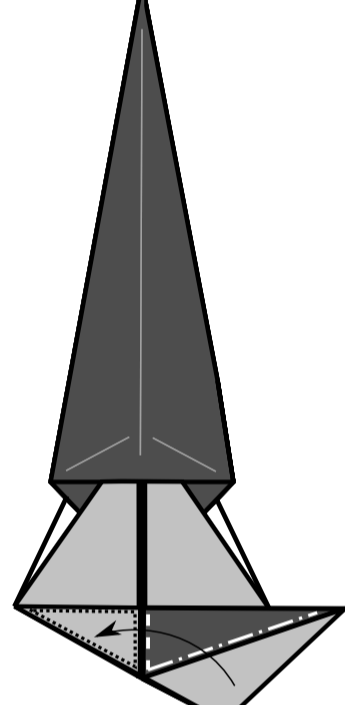

Squash fold into the pockets.

10\*.

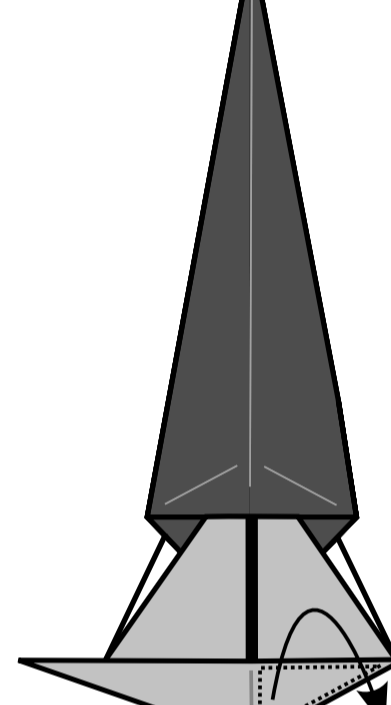

Valley fold. Tuck the area under the mountain fold line under the main layer.

11.

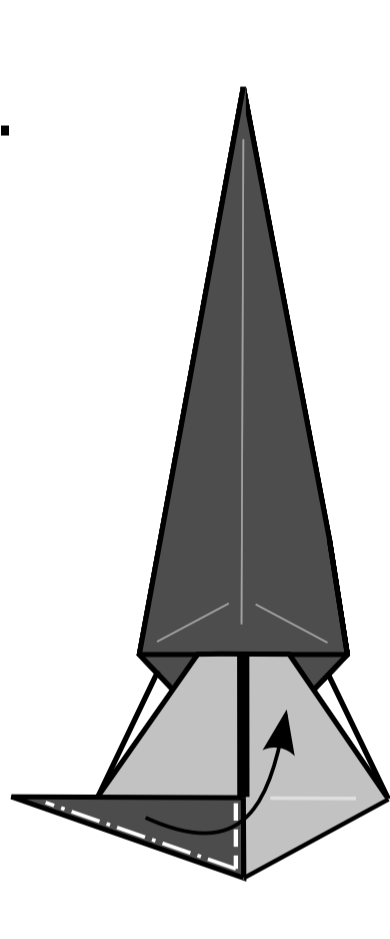

Squash fold.

12\*.

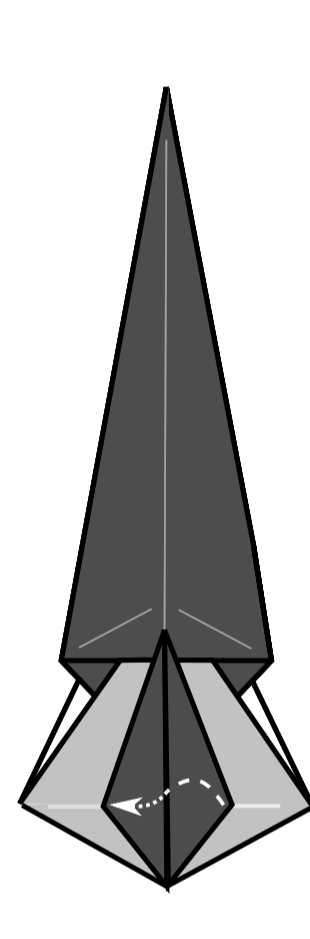

Pull out the hidden paper onto the top layer.

13.

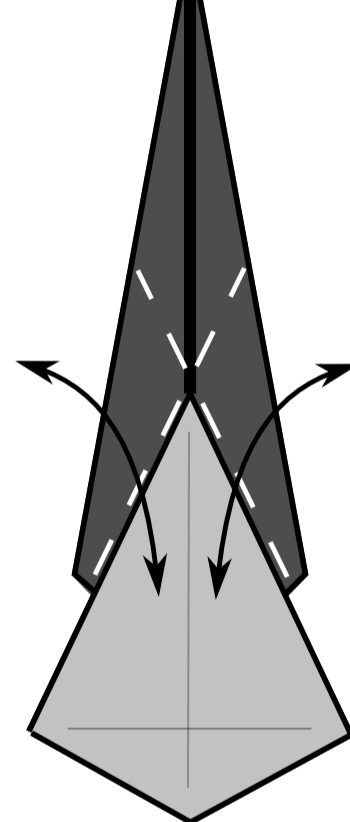

Squash fold.

14\*.

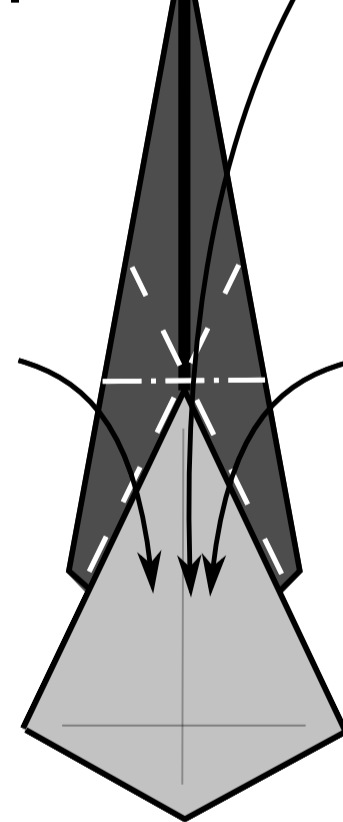

Insert one flap into the other. Turn the model over.

15.

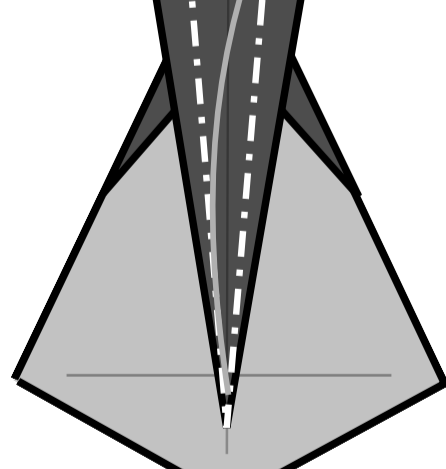

Valley fold and unfold.

16\*.

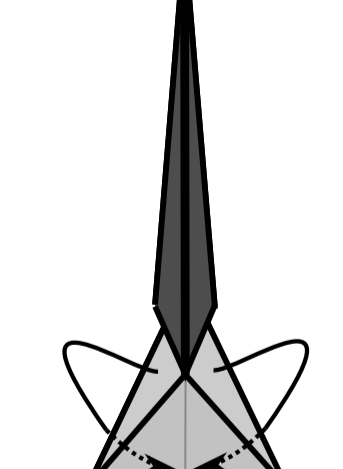

Collapse the top corner symmetrically using the existing creases from step 15. This is similar to folding a preliminary base.

17.

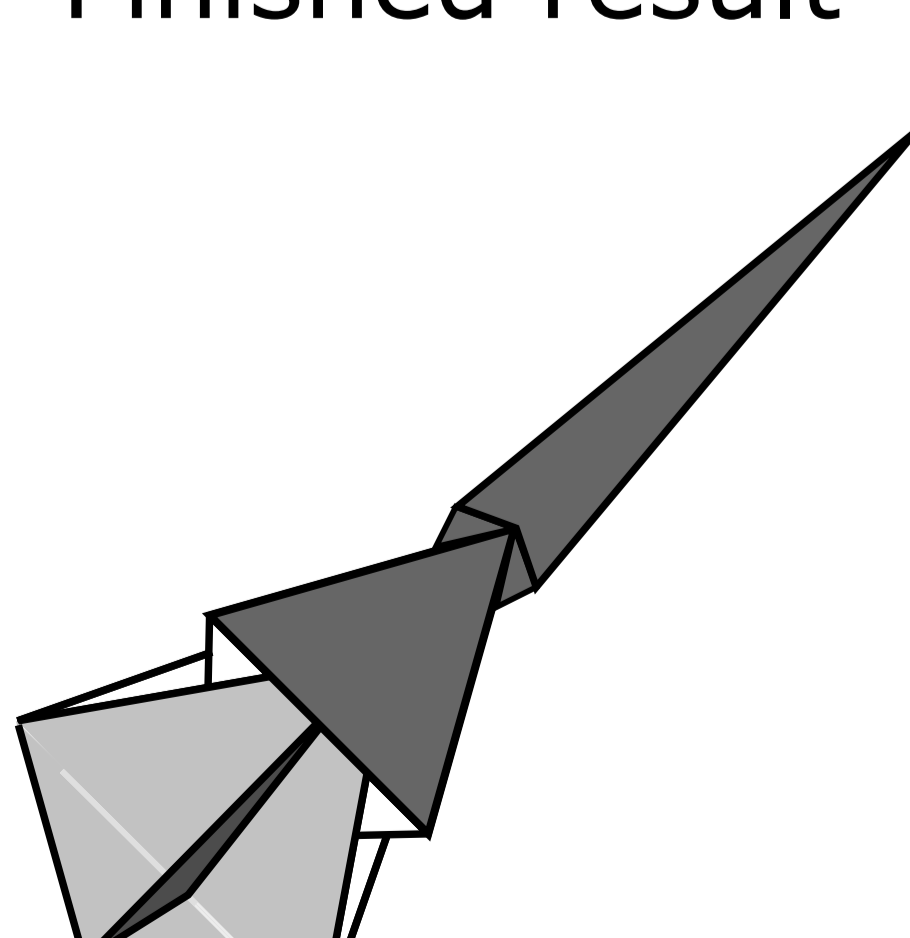

Petal fold as far as it can go.

18.

Tuck the two triangles under the main layer. Turn the model over.

## Finished result

(Top view. The cockpit will be upright.)
